

## Entireweb Launches New Web 2.0 Interface

Halmstad, Sweden – March 1, 2009 – Today, [Entireweb](#) announced the new Web 2.0 interface of its search engine.

With an ever growing number of people using the Internet, and the popularity of Web 2.0, [Entireweb](#) now follows this by launching a new interface.

The new Web 2.0 interface will allow users to personalize their experience by choosing between a large number of different skins (themes). It also features a new search results page with many new functions, such as regional search, recent searches, and other key features.

Today's release highlights a number of innovative news:

- Personalization of the look and feel of the search engine using skins. (themes).
- Major interface changes made on the main page and search results page of the search engine.
- Advanced search features which include "safe search" filtering that filters out potentially objectionable content from the search results, the ability to look at a screenshot of each page and much more.

Entireweb's new interface is available at <http://www.entireweb.com>.
